22	1. The Pinconschmikal Walialat precision mechanics plant in Budapestl manufactures most of the component parts for the machinary it produces itself, but very special perts are made by the Remix Radiotechnikal Vallalat (condensers)
	and the Caman Optibal Mivek (small wheels for milling machines). The parts manufactured by these two enterprises usually were not delivered in time, causing delays in assumbling the machines. However, all three enterprises were under the supervision of the military and consequently the delays were
	always quickly overcome. 2. The Pinneschunftd Vellalet had modern modeline which had been number-tured in Bungary and Best Germany.
}	3. It is believed that the Burgarian-manufactured reduc equipment is better than the Busarian. The Burgarian sets were better technically and various improvements over the Soviet prototypes had been made. Furthermore, each radar set
	manufactured by the enterprise was subjected to testing by the iditary, who tested each part carefully, so that it was impossible for a defective radar set to be put into operation.
	(two sheets), can showing
	the general legent of the various buildings of the Fisconsechanika Unliniat and the other two the internal prosagment of the second and third floors respectively of the assembly unrishop building. Explanatory notes on the shotches are in General.
